CO₂ Fractional Technology

DOT

The **Gold Standard**
in dermatological laser surgery

- Reduce the appearance of acne and other scars
- Reverse the appearance of aged and sun damaged skin
- Improve texture and firmness
- Smooth wrinkles and lines
- Skin renewal

Benefits of Fractional Skin Resurfacing

Utilizing a 'dot' pattern to create microscopic perforations in the skin while leaving the areas around each 'dot' intact. This fractional laser allows the skin to heal more quickly from the edge of these tiny 'dots'. **The overall procedure is safer, faster and more efficient.** In comparison to traditional CO₂ lasers, fractional CO₂ laser treatment for non-facial areas like neck and décolletage are safer and much easier to treat due to its minimum invasive and rapid healing capabilities. This **FDA approved system** allows doctors to have more control customizing treatment specifically to the patient and even modify treatment during the procedure to achieve better results.

Minimum Downtime • Outstanding Results

Lines & Wrinkles
